
How Be My Eyes Works? Connecting Visually Impaired Individuals with Sighted Volunteers.

Description

Be My Eyes is a free mobile application that connects visually impaired people with sighted volunteers from around the world. The app was launched in 2015 and has since become a valuable tool for visually impaired people, providing them with greater independence and access to information.

The Concept of Be My Eyes:

The concept of Be My Eyes is simple yet powerful. The app connects visually impaired people with sighted volunteers who can help them with tasks such as reading labels, identifying objects, and navigating new places. The app uses video calls to connect visually impaired people with sighted volunteers, enabling them to communicate in real-time and get immediate assistance.

How It Works:

To use the app, visually impaired people simply need to open the app and request assistance for a specific task. The app then connects them with a sighted volunteer who can help them with the task. The sighted volunteer can use the camera on their smartphone to see what the visually impaired person is seeing and provide verbal guidance.

A Global Community of Volunteers:

Be My Eyes has become a global community of volunteers who are dedicated to helping visually impaired people. The app has over 4 million volunteers from around the world who speak over 180 languages. This means that visually impaired people can get assistance in their native language, no matter where they are in the world.

Recognition and Partnerships:

The app has been widely praised for its innovative approach to connecting visually impaired people with sighted volunteers. It has won numerous awards, including the Google Play Award for Best Accessibility Experience in 2018 and the Apple Design Award in 2015.

Be My Eyes has also been used by businesses and organizations to provide better accessibility for visually impaired people. For example, Microsoft, Google, Spotify, and other companies have partnered with Be My Eyes to provide technical support and enhance accessibility for visually impaired people using their products.

Conclusion:

In conclusion, Be My Eyes is a powerful tool that has transformed the lives of visually impaired people by providing them with greater independence and access to information. The app has created a global community of volunteers who are dedicated to helping visually impaired people, making it a truly innovative and inspiring application.
